

In the course of the modernization of the **SchüCam V20**, the software has been divided into following three installation packages.

1. **SchüCam V20** - software
2. **SchüCam V20** - profile database with DXF
3. **SchüCam V20** - manuals

As of now, the **SchüCam V20** software will be relative to each machine, for example, the PBS version update, is only able to be installed on the PBS machine, however, the **office** variant still may be fully installed on each computer with all machines.

If you have multiple machines from **Schüco**, we recommend the installation of the **current** version of the **SchüCam V20** on the **office** computers, please **always** choose the highest number available.

In addition, even if you already have an older version of the **SchüCam V20** installed, we kindly ask you to install **all** three packages during the initial installation, as in the future you will then only need to install the respective updated installation package.

By dividing the one **SchüCam V20** software installation package into three separate installation packages, it has made the product smaller with the following advantages:

- ✓ Quick download time
- ✓ Short installation time
